

ABSTRACT OF THE DISCLOSURE

A tape dispensing device is able to neutralize a static charge on a piece of tape so that the tape will not curl up and become tangled. The tape dispensing device has a body member which houses a roll of tape. A cutting device is coupled to one end of the body member for cutting a piece of tape from the roll of tape. A neutralizing device is coupled to the body member and next to the cutting device for neutralizing a static charge from the piece of tape.
